

Diabetes? Don't lose your eye sight

20/20 VISION DOES NOT MEAN THERE IS NO DIABETIC RETINOPATHY.

1

Most of the eye diseases do not affect the vision until the disease has progressed. Therefore, good eye sight does not mean that the patient doesn't have diabetic eye disease.

YOUR VISION IS NOT AFFECTED BY TAKING THE EXAM.

2

If eye drops are used to dilate the pupil, the vision will be blurred for about 6 hours. Wear dark glasses until the drops wear off. Sunlight can damage your eye.

YOU NEED THE EYE EXAM, IRRESPECTIVE OF WHETHER YOU FEEL PAIN OR NOTICE CHANGES IN YOUR VISION.

3

Most of the eye diseases such as glaucoma and age-related macular degeneration develop without signs and symptoms. Regular eye exams are essential to protect sight because by the time a change in vision is observed, the damage can be irreversible.

IT DOES NOT HURT TO HAVE YOUR EYES DILATED.

4

Eye drops are used to dilate the pupil of the eye and the procedure is painless.
